

Man multipliziert Brüche, indem man Zähler mal Zähler und Nenner mal Nenner nimmt.

$$\frac{2}{5} * \frac{3}{7} = \frac{2 * 3}{5 * 7} = \frac{6}{35}$$

Dabei sollte man so früh wie möglich kürzen.

$$\frac{3}{4} * \frac{8}{9} = \frac{\cancel{3}^1 * \cancel{8}^2}{\cancel{4}_1 * \cancel{9}_3} = \frac{2}{3}$$

1 Multipliziere

(1) $\frac{3}{63} * \frac{7}{12} =$

(2) $\frac{6}{20} * \frac{4}{42} =$

(3) $\frac{2}{6} * \frac{2}{10} =$

(4) $\frac{4}{54} * \frac{6}{28} =$

(5) $\frac{2}{24} * \frac{4}{6} =$

(6) $\frac{6}{18} * \frac{3}{48} =$

(7) $\frac{6}{63} * \frac{7}{48} =$

(8) $\frac{5}{15} * \frac{3}{35} =$

(9) $\frac{2}{15} * \frac{3}{10} =$

(10) $\frac{7}{28} * \frac{4}{70} =$

(11) $\frac{7}{20} * \frac{4}{70} =$

(12) $\frac{6}{40} * \frac{5}{42} =$

(13) $\frac{7}{30} * \frac{5}{70} =$

(14) $\frac{2}{6} * \frac{2}{6} =$

(15) $\frac{7}{20} * \frac{4}{63} =$

(16) $\frac{7}{35} * \frac{5}{70} =$

(17) $\frac{4}{48} * \frac{6}{28} =$

(18) $\frac{4}{54} * \frac{6}{24} =$

(19) $\frac{6}{35} * \frac{5}{48} =$

(20) $\frac{2}{28} * \frac{4}{10} =$
